

Address Manager for SAP® Business Suite and S/4

Address Manager for use with mySAP® Business Suite or S/4 HANA can help SAP customers maintain the accuracy of their address data records throughout their business. *Address Manager* will ensure address details are correct and valid once entered and maintain the accuracy of address records over time.

Address Manager enables organizations to:

- **R**educe time to enter address records and increase their accuracy.
- **O**ptimize the quality of your customer, vendor and partner records.
- **I**mprove operations across your enterprise.

Features

- Access any Canadian address in an average of 10 keystrokes or less. In 95% of cases the entry of a postal code and a house number are sufficient to achieve a match.
- Validates postal code, street, city, province combination against official address data licensed from Canada Post®. Suite information may also be validated.
- Supports French address formats.
- Batch processes existing addresses and allows employees to adjust data and/or automatically update SAP address information.
- Generates statistical information for addresses processed in batch mode.
- Easy to Install. Use SAP's Transport Management System to import application and custom programs to load Postal Code^{OM} reference data.
- Developed in ABAP™, SAP's native language.
- Utilizes SAP's Business Add-In (BADI) functionality to call *Address Manager* routines which ensures no SAP modifications are required.
- Receive quarterly or annually Canada Post® Address information updates.

Address Manager validates and corrects Canadian addresses within SAP® Business Partner, SAP® Business Information Warehouse (BW), and many other applications in SAP R/3® Enterprise, mySAP® Business Suite and S/4 HANA. Address information for Customers, Vendors, Business Partners, Sales Orders, Purchase Orders, Plant Maintenance Objects and Plants are all processed.

DynPro Group Inc.

DynPro is a third party software provider of SAP data quality solutions. We are a member of the SAP PartnerEdge Build Open Ecosystem.

Address Manager

Advanced Address Parser

As a Canadian software vendor, DynPro Group understands the linguistic, regional, and personal preferences used when entering address information. *Address Manager* makes use of a highly intelligent parser to successfully parse these input variations.

Cost Effective

Take advantage of DynPro's competitive pricing. There is a one-time license fee and an annual maintenance fee. The maintenance fee includes quarterly or annual reference data updates, upgrades to the software when available, and complete support.

Free Data Health Check

Send us a sample of your address data and receive an Address Quality Summary Report.

System Requirements

- SAP NetWeaver Application Server 7.0 +

Benefits

- Standardize and validate addresses, auto-populate missing fields, and provide a single, integrated view of your customers, suppliers, and partners.
- Increase productivity - Simply enter a postal code and house number and the system will auto populate street, city, and region fields, reducing data entry time and associated costs. *Address Manager* enables keystroke savings on every address entered, so data entry is faster, and calls can be completed more quickly.
- Improve data quality - Capture valid and up-to-date name and address data in a standard format and improve data quality across your organization.
- Reduce waste - Reduce returned mail by improving your contact data. Twenty to thirty-five percent of addresses that have not previously undergone postal validation require changes that can be corrected automatically. A recent Canada Post® study^[1] concluded that approximately twenty-seven percent of addresses were incomplete or invalid.
- Save on the high cost of misdirected or returned mail - Incorrect address information leads to misdirected or returned mail. *Address Manager* minimizes this problem by correcting an address before mailing eliminating wasted printing and postage costs from undeliverable mail.
- Improve communications - Address communications correctly to ensure correct delivery and enhance customers' confidence in your organization.
- Facilitate better decision making - By improving data quality, *Address Manager* can improve the accuracy of management reports and the results of customer analysis, and thus facilitate more accurate decision making.
- Easy to integrate - Integration of *Address Manager* with your SAP R/3®, mySAP® ERP, or SAP S/4 HANA system is easy as the application is built in ABAP™ and utilizes SAP's standard ABAP™ Add-On methodology.
- Ease of use - To utilize *Address Manager*, there is no need to attend costly courses or to wade through thick cryptic manuals. No special proprietary API is required to configure or operate the software. *Address Manager* ensures a short learning curve and eliminates the need for extensive training.

"The time has come to acknowledge that an organization can no longer treat data as a by product of their systems. In the intelligent enterprise, information is the product and data is its raw material. Because the quality of the product can only be as good as the quality of its raw materials, organizations must bite the bullet and invest in data quality improvement practices. Although you can start small with limited data profiling and data cleansing activities, you must rapidly evolve into a robust data quality improvement program with focus on restoring the cross-organizational, 360-degree view of your business."

"Data Strategy", by Larissa Terpeluk Moss, Majid Abai, Sid Adelman (2005)
