## Address Manager Batch for mySAP® Business Suite

*Address Manager Batch* is an address validation and correction software package for Canadian addresses stored in any SAP® NetWeaver based ERP or CRM System. *Address Manager Batch* cleans, completes and verifies existing records in an address database. Over time, frequent address cleansing helps prevent data quality issues by keeping the address database correct, accurate and up to date.

### Key Features

- SERP-certified software: *Address Manager Batch* is certified by Canada Post® as meeting all the address data cleansing and validation requirements of the Software Evaluation and Recognition Program (SERP). SERP evaluates software packages for their ability to validate and correct mailing lists to Canada Post requirements.
- Meet requirements of the Receiver General (RG) Directive -'Postal Address Accuracy for Receiver General Payments': *Address Manager Batch* will allow Government of Canada departments and agencies to meet the Address Accuracy requirements specified in the recent RG Directive.

### Business Benefits

- Accurate and up-to-date addresses: *Address Manager Batch* matches your address database against the latest Canada Post address data file and then reports how successful its address data cleansing run has been. Over time, Postal Codes<sup>OM</sup> and municipality boundaries change. Regular address cleansing helps ensure your address database is correct, validated and standardized at all times.
- Better delivery rates: Undeliverable mailings or shipments can result in substantial costs and inconvenience to you and your business partners. Frequent address cleansing helps reduce return rates, delivery surcharges and associated overheads while improving customer and supplier satisfaction.
- Postage discount with SERP-certified software: *Address Manager Batch* SERP-certified software enables Canadian mailers to potentially qualify for discounts on outbound mail and provides a Statement of Accuracy (SOA) before and after the corrections.
- Easier database analysis and de-duplication: When all records in your address database are stored correctly and consistently thanks to frequent address data cleansing, duplicates are easier to find and the results of database analysis are more accurate and reliable.

# Address Manager Batch

## Cost Effective

Take advantage of DynPro's competitive pricing. There is a one-time license fee and an annual maintenance fee. The maintenance fee includes monthly or quarterly reference data updates, upgrades to the software when available, and complete support.

## Free Data Health Check

Send us a sample of your address data and receive an Address Quality Summary Report.

## System Requirements

- SAP WebAS 6.20 +  
or
- SAP NetWeaver Application Server 7.0 +

## Technical information

- SAP's Transport Management System is used to import the tool and custom programs are provided to load the Postal Code<sup>OM</sup> reference data. A custom transaction is then run to validate, correct, and standardize address data. The corresponding Statement of Accuracy (SOA) is then produced.
- *Address Manager Batch* is currently available for all SAP<sup>®</sup> NetWeaver based ERP and CRM Systems.

## What is SERP recognition and why is it important?

- Canada Post's Software Evaluation and Recognition Program (SERP) is your guarantee that an address quality solution meets Canada Post's minimum standards for validating and correcting addresses. In order to obtain SERP recognition, products such as *Address Manager Batch* must successfully process test data provided by Canada Post. In order to qualify for postage discounts based on address accuracy, Canada Post requires your addresses to be processed by a SERP recognized product. You prove this by submitting a Statement of Accuracy Report (SOA). Only recognized products like *Address Manager Batch* can produce the SOA report.

*Address Manager Batch* is the perfect complement to *Address Manager*, an address management solution that performs front-end validations, corrections, and standardizations to Canadian addresses as they are being entered or maintained in the SAP<sup>®</sup> system.
